DOCUMENTATION OF ENVIRONMENTAL INDICATOR DETERMINATION

InterimFinal 2/5/99

RCRA Corrective Action Environmental Indicator (EI) RCRIS code (CA725)

Current Human Exposures Under Control

Facility Name: Texana Tank Car and Manufacturing, Inc. Inc.
Facility Address: P. O. Box 550, Highway 82 West, Nash, TX 75569
Facility EPA ID#: TXD043195221

Has all available relevant/significant information on known and reasonably suspected releases to soil, groundwater, surface water/sediments, and air, subject to RCRA Corrective Action (e.g., from Solid Waste Management Units (SWMU), Regulated Units (RU), and Areas of Concern (AOC)), been considered in this EI determination?

_______ Ifyes - check here and continue with #2 below.

_______ Ifno - re-evaluate existing data, or

______ if data are not available skip to #6 and enter" IN" (more information needed) status code.

BACKGROUND

Definition of Environmental Indicators (for the RCRA Corrective Action)

Environmental Indicators (EI) are measures being used by the RCRA Corrective Action programto go beyond programmatic activity measures (e.g., reports received and approved, etc.) to track changes in the quality of the environment. The two EI developed to-date indicate the quality of the environment in relation to current human exposures to contamination and the migration of contaminated groundwater. An EI for non-human (ecological) receptors is intended to be developed in the future.

Definition of "Current Human Exposures Under Control" EI

A positive "Current Human Exposures Under Control" EI determination ("YE" status code) indicates that there are no "unacceptable" human exposures to "contamination" (i.e., contaminants in concentrations in excess of appropriate risk-based levels) that can be reasonably expected under current land- and groundwater-use conditions (for all "contamination" subject to RCRA corrective action at or from the identified facility (i.e., site-wide)).

Relationship of EI to Final Remedies

While Final remedies remain the long-term objective of the RCRA Corrective Action program the EI are near-term objectives which are currently being used as Program measures for the Government Performance and Results Act of 1993, GPRA). The "Current Human Exposures Under Control" EI are for reasonably expected human exposures under current land- and groundwater-use conditions ONLY, and do not consider potential future land- or groundwater-use conditions or ecological receptors. The RCRA Corrective Action program's overall mission to protect human health and the environment requires that Final remedies address these issues (i.e., potential future human exposure scenarios, future land and groundwater uses, and ecological receptors).

Duration / Applicability of EI Determinations

EI Determinations status codes should remain in RCRIS national database ONLY as long as they remain true (i.e., RCRIS status codes must be changed when the regulatory authorities become aware of contrary information).

Page 2

2. Are groundwater, soil, surface water, sediments, or air **media** known or reasonably suspected to be "contaminated" above appropriately protective risk-based "levels" (applicable promulgated standards, as well as other appropriate standards, guidelines, guidance, or criteria) from releases subject to RCRA Corrective Action (from SWMUs, RUs or AOCs)?

		Yes	No	?	Rationale / Key Contaminants
Groundwater			_x		
_					
Air (indoors) ²			_X		
Surface Soil (e.g., <2	2 ft)		_X		
Surface Water			_X		
Sediment	• •		_x_		
Subsurf Soil (e.g.,>	·2 tt)		_X		
Air (outdoors)			_x_		
aj th If	pproprinat thes fyes (for contam	ate "level e "level r any me inated"	vels," and ls" are not edia) - con medium, o	reference t exceed tinue at citing ap	and enter "YE," status code after providing or citing being sufficient supporting documentation demonstrating ed. Iter identifying key contaminants in each appropriate "levels" (or provide an explanation for the uld pose an unacceptable risk), and referencing
SI	upporti	ng docu	ımentatio	n.	
If	funknov	wn (for	any media	ı) - skip	to #6 and enter "IN" status code.
Rationale and Refere	ence(s):				

Footnotes:

¹ "Contamination" and "contaminated" describes media containing contaminants (in any form, NAPL and/or dissolved, vapors, or solids, that are subject to RCRA) in concentrations in excess of appropriately protective risk-based "levels" (for the media, that identify risks within the acceptable risk range).

² Recent evidence (from the Colorado Dept. of Public Health and Environment, and others) suggest that unacceptable indoor air concentrations are more common in structures above groundwater with volatile contaminants than previously believed. This is a rapidly developing field and reviewers are encouraged to look to the latest guidance for the appropriate methods and scale of demonstration necessary to be reasonably certain that indoor air (in structures located above (and adjacent to) groundwater with volatile contaminants) does not present unacceptable risks.

Page 3

3. Are there **complete pathways** between "contamination" and human receptors such that exposures can be reasonably expected under the current (land- and groundwater-use) conditions?

Summary Exposure Pathway Evaluation Table

Potential **Human Receptors** (Under Current Conditions)

"Contaminated" Media	Residents Workers Day-Care Construction Trespassers Recreation Food ³
Groundwater	
Air (indoors)	
Soil (surface, e.g., <2 ft)	
Surface Water	
Sediment	
Soil (subsurface e.g., >2 ft	
Air (outdoors)	
Instructions for Summary	Exposure Pathway Evaluation Table:
-	ecific Media including Human Receptors' spaces for Media which are not) as identified in #2 above.
	r "no" for potential "completeness" under each "Contaminated" Media Human
	nation (Pathway).
	e evaluation to the most probable combinations some potential "Contaminated"
	combinations (Pathways) do not have check spaces (""). While these probable in most situations they may be possible in some settings and should be
to #6,; place, contan	pathways are not complete for any contaminated media-receptor combination) - skip and enter "YE" status code, after explaining and/or referencing condition(s) inwhether natural or man-made, preventing a complete exposure pathway from each minated medium (e.g., use optional <u>Pathway Evaluation Work Sheet</u> to analyze pathways).
	pathways are complete for any "Contaminated" Media - Human Receptor nation) - continue after providing supporting explanation.
	nown (for any "Contaminated" Media - Human Receptor combination) - skip to #6 ter "IN" status code
Rationale and Reference(s):
	······

Current Human Exposures Under Control

³ Indirect Pathway/Receptor (e.g., vegetables, fruits, crops, meat and dairy products, fish, shellfish, etc.)

Environmental Indicator (EI) RCRIS code (CA725) Page 4

4	Can the exposures from any of the complete pathways identified in #3 be reasonably expected to be "significant" (i.e., potentially "unacceptable" because exposures can be reasonably expected to be: 1) greater in magnitude (intensity, frequency and/or duration) than assumed in the derivation of the acceptable "levels" (used to identify the "contamination"); or 2) the combination of exposure magnitude (perhaps even though low) and contaminant concentrations (which may be substantially above the acceptable "levels") could result in greater than acceptable risks)?				
	Ifno (exposures can not be reasonably expected to be significant (i.e., potentially "unacceptable") for any complete exposure pathway) - skip to #6 and enter "YE" status code after explaining and/or referencing documentation justifying why the exposures (from each of the complete pathways) to "contamination" (identified in #3) are not expected to be "significant."				
	If yes (exposures could be reasonably expected to be "significant" (i.e., potentially "unacceptable") for any complete exposure pathway) - continue after providing a description (of each potentially "unacceptable" exposure pathway) and explaining and/or referencing documentation justifying why the exposures (from each of the remaining complete pathways) to "contamination" (identified in #3) are not expected to be "significant."				
	Ifunknown (for any complete pathway) - skip to #6 and enter "IN" status code Rationale and Reference(s):				

⁴ If there is any question on whether the identified exposures are "significant" (i.e., potentially "unacceptable") consult a human health Risk Assessment specialist with appropriate education, training and experience.

Page 5

Can th	e signino	
		If yes (all "significant" exposures have been shown to be within acceptable limits) - continue and enter "YE" after summarizing <u>and</u> referencing documentation justifying why all "significant" exposures to "contamination" are within acceptable limits (e.g., a site-specific Human Health Risk Assessment).
		If no (there are current exposures that can be reasonably expected to be "unacceptable")-continue and enter "NO" status code after providing a description of each potentially "unacceptable" exposure.
		Ifunknown (for any potentially "unacceptable" exposure) - continue and enter "IN" statucode

Final Note: The purpose of the Human Exposures EI is to qualitatively screen exposures based on current land and groundwater use. A "YE" determination does not constitute a screening tool that ends the corrective action process. The "YE" determination may be changed at any time as new information becomes available.
